

Browse the Web With Rafaël Rozendaal's Modernist Kaleidoscope

By Dylan Kerr
March 20, 2015

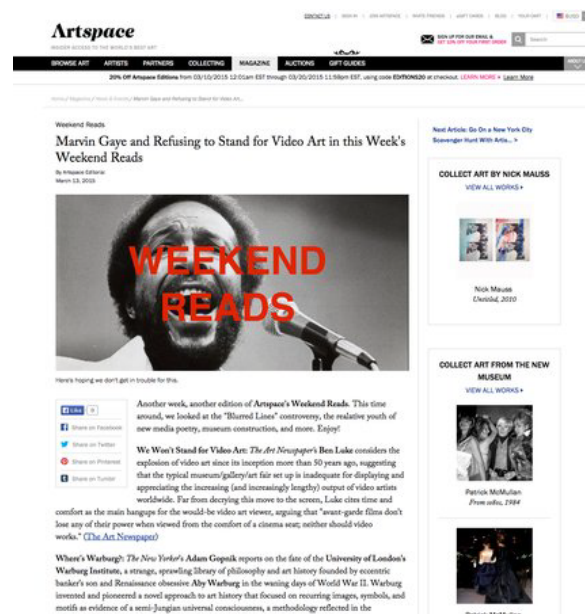

Woah.

ing (2013), which adds a button that temporarily removes all text from a given webpage leaving only images and non-text site items visible.

Abstract Browsing operates under a similar logic, but with far more eye-catching results—pushing a button on Chrome's toolbar renders a given web page in vivid Microsoft Paint hues, with the discrete site elements each in a contrasting colored box. The colors shift every few seconds, meaning one page can result in nearly limitless combinations.

As a quick illustration, here's what last week's Weekend Reads normally looks like:

Here it is with Rozendaal's Abstract Browsing activated:

And here it is three seconds later:

What's the use, you ask? That's a question for aesthetic philosophers and their ilk. If you want to experience the magic for yourself, go to AbstractBrowsing.net and download the extension via the Chrome Web Store. It's free, and it looks nice. What more could you ask for?
